DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Masui (US 6556523).

In regard to claim 1, Masui teaches a recording clock signal generating apparatus located in an information recording device for recording information in a recording medium in which a wobbled information recording track and pre-pit formed thereon, said apparatus comprising: a wobble signal detecting section for detecting a wobble signal (column 2 line 48); a pre-pit signal detecting section for detecting a pre-pit signal (column 2 lines 56-57); a phase comparing section for comparing a phase of said wobble signal to that of said pre-pit signal and outputting the phase difference (see column 2 lines 56-57); a phase-shifting section for shifting a phase of said wobbled signal based on said phase difference only when said phase difference is within a predetermined range (column 2 line 54. see phase adjusting section); and a clock signal generating section for generating a recording clock signal based on said phase-shifted wobble signal (column 2 lines 46 and 47).

Art Unit: 2627

In regard to claim 7, see claim 1 rejection above.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Masui in view of Sugie et al. (US 6498773).

In regard to claim 2, Masui teaches all the elements of claim 2 except a control section for controlling said phase-sifting section when said phase difference is within a threshold width value set for the phase differences in the past.

Sugie et al. teaches a control section for controlling said phase-sifting section when said phase difference is within a threshold width value set for the phase differences in the past (column 8 lines 44-47. Sugie teaches controlling a circuit by ensuring the phase difference falls within a permissible range. In regard to the values being set in the past it is inherent the threshold values would be set in the past).

The two are analogous art because they both deal with the same field of invention of recording onto an optical disc.

At the time of invention it would have been obvious to one of ordinary skill in the art to provide the apparatus of Masui with the phase comparison of Sugie et al. The rationale is as follows: At the time of invention it would have been obvious to provide

Art Unit: 2627

the apparatus of Masui with the phase comparison of Sugie et al. because it would ensure there will not be any major errors in reproduction.

In regard to claim 6, see claim 2 rejection above.

Allowable Subject Matter

Claims 3-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Reasons for Allowance in prior Office Action.

Response to Arguments

Applicant's arguments filed 9/13/06 have been fully considered but they are not persuasive. In regard to claims 1 and 7, applicant argues on page 3, paragraph 2, lines 2-4, that Masui does not teach "the claimed phase shifting section for shifting a phase of said wobbled signal based on said phase difference only when said phase difference is within a predetermined range". The examiner maintains this rejection because as shown in column 2 line 54, Masui does shift the phase according to the comparison between the pre-pit and wobble signal. In regard to the phase difference being within a predetermined range, a difference in phase can only be between 0 and 360 degrees. Since there is no infinite phase difference, the difference between the wobble signal and pre-pit signal is always in a predetermined range.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Haley whose telephone number is 571-272-0574. The examiner can normally be reached on M-F 8:30am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Korzuch can be reached on 571-272-7589. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
